What is the Internet costing your business?

netassure
from **NetComm**[®]

What is NetAssure?

NetComm's NetAssure is a remotely managed network service that provides businesses the security and control to increase productivity and save money by reducing the unnecessary workload of IT resources.

It's an all-in-one Internet business network solution that allows all business types to connect to their network anywhere in the world, control and monitor Internet usage as well as protect the network from all sorts of threats.

Through the central server network, the NetAssure team work behind the scenes, constantly updating the NetAssure service to make sure you have the latest security and features available.

Connect

You and your staff have greater flexibility in how and where you work. Whether you need an updated inventory, the latest sales figures, a recent presentation or accounts information, you can access information safely and securely via your network connection. You also have greater flexibility to allow other companies limited access to your network to view and use information they need and nothing else.

You can link two or more offices together in a Virtual Private Network (VPN). You can also allow individual computers to create VPNs into your office ensuring you and your staff are securely connected to the office when you need to be - wherever you are.

Protect

Secure your Internet connection and protect your information assets. With the NetAssure service you can specify what data you want to enter or leave your computer network using the reporting and control options that can be accessed, reviewed or changed anytime anywhere in the world.

The NetAssure service provides enterprise level security that protects your business from external hackers and viruses. It also affords a level of internal information protection. You control who sees what on your network.

Control

Log onto the NetAssure website from anywhere and use the reporting and control options to access the level of information your business needs not only to see how your Internet connection is being used, but to ensure you're getting the most from it. Even if you don't feel inclined to check, at the end of every monthly billing period a simple to read report is delivered to you to keep you informed.

Why NetAssure?

NetComm's NetAssure not only understands the challenges of a business, but delivers effective IT requirements, ensuring each business unit remains productive and efficient. NetAssure provides:

- Network monitoring
- Bandwidth control
- Web content filtering - blocking of unwanted sites to reduce cyber-slacking and inappropriate conduct
- A secure network for sharing data through a secure VPN Firewall
- Protecting the network from threats
- An improvement in operational efficiency
- Access to the network both internally and remotely
- Traffic logs recorded and reported
- Reduction in overall networking and the unnecessary workload of IT resources

Benefits

- A constant secure and reliable connection
- Protection against worms and viruses
- Blocks bandwidth intensive sites such as YouTube
- Stop Spam permanently
- Blocks harmful websites – such as drugs and pornography sites
- Restricted access to the Internet
- Up to 100 PC's can be supported from one site
- No up front investment
