NetAssure helps high-tech firm solve a non-tech issue

CHALLENGE:

A communications firm needed to ensure effective use of time and computing resources

SOLUTION:

NetAssure Internet Productivity Service to assist with content filtering, security and the creation of a Virtual Private Network (VPN).

RESULTS:

- Increased productivity
- Savings on hardware, licensing and maintenance
- Staff now able to operate remotely through a VPN

Despite being an industry-leading firm dealing in communication technologies, CVT (Global) still faced many of the same problems with computer usage that any Australian business does. Chief amongst these was making sure that their time and resources were being used as effectively as possible.

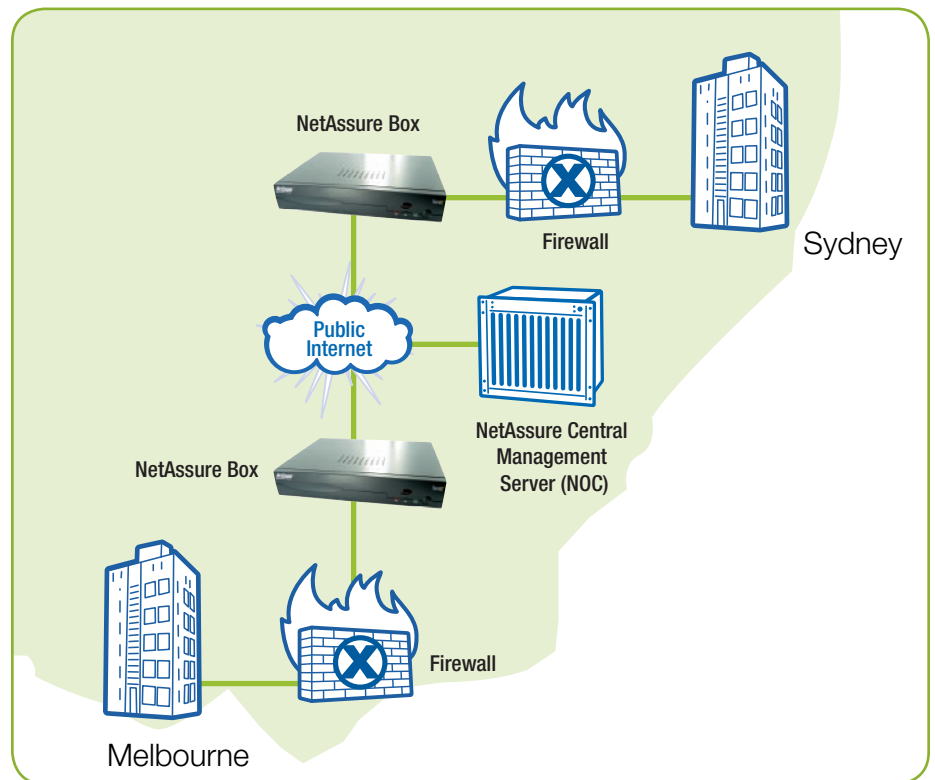

As with many other companies, CVT were presented with the challenge of ensuring that their computer systems were complying with both company policy and workplace law. Whilst employees accessing non-work sites like Facebook and MySpace was not a major problem, there were a whole raft of other potentially undesirable sites that management could not be aware of. The potential use of the company internet network for downloading media could also create complications, both from a legal point of view and in exceeding the firm's download cap. Overall, the firm's management wanted the reassurance that their network was being used appropriately and safely.

The NetAssure Internet Productivity Service was the answer to CVT's dilemma. Installing the system to cover CVT's Sydney and Melbourne offices took just two hours and the benefits were immediate. NetAssure's content filtering and reporting functions brought about a change in employee Internet culture and the potential for excessive downloading was now avoided.

CVT's Travis McInnes feels that the service has not only provided results, but is value for money too.

Overall, CVT has found NetAssure to be simple to configure and use. With the VPN setup as easy as three clicks and the ease of administration from the web-based interface, maintaining the system is made easy

Mr Travis McInnes, Managing Director from CVT

“The license structure of NetAssure is more cost effective than solutions we have used in the past,” says Mr McInnes. “Staff productivity has increased and the ability to monitor Internet usage has helped us to manage our monthly downloads and prevent large ISP bills,” he says.

“With the implementation of NetAssure we were also able to retire servers previously used for our firewall and VPN, so we’re saving hardware, licensing and maintenance costs, Mr McInnes says.

The positive outcome that CVT gained is typical of the experience that other firms have obtained from NetAssure. No matter whether your firm is at the cutting edge of IT or a small business with no specialist technical staff, some human factors are universal. Fortunately the solution is as well.
