

Connect

your network simply and securely
via the Internet

Protect

your entire network from threats

Control

access and usage of the Internet

A Managed Network Service
for your Business

netassure
from NetComm®

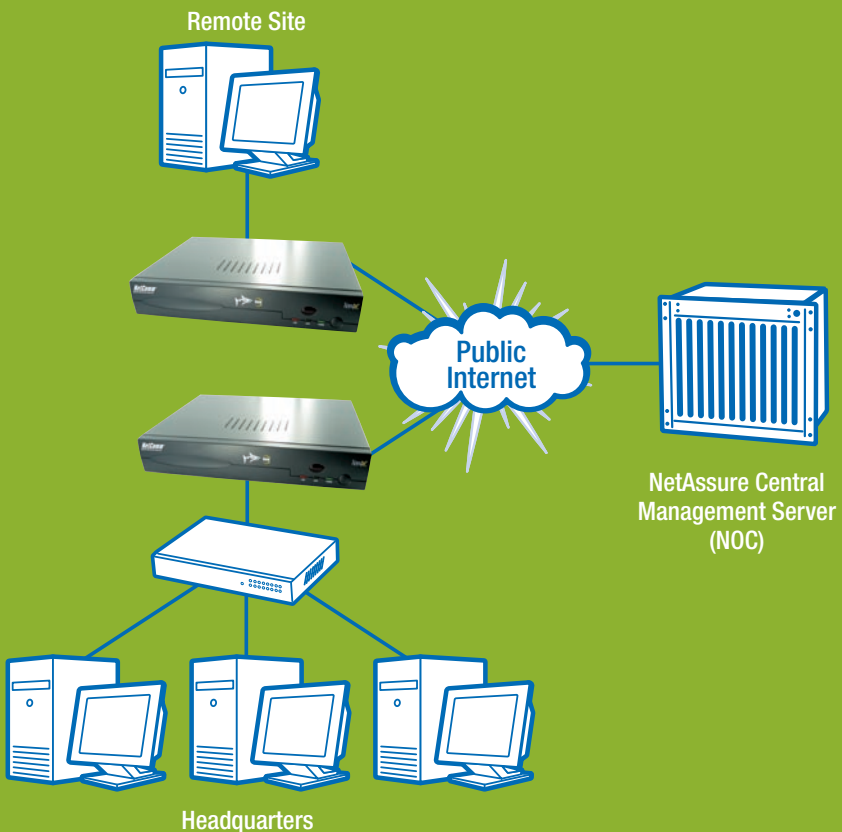

Connect

All you need is a broadband connection...
we handle the rest

- NetAssure operates in conjunction with any public broadband ISP service
- Connects using any broadband technology (xDSL, 3G and/or Ethernet)
- Allows businesses to link multiple sites through a secure high speed pipe
- Can link domestic and/or international branch offices
- New sites can be added to networks without IT staff attending on site
- Staff can connect securely from remote locations without risk

How does the NetComm NetAssure Service work?

- Secure connectivity established and maintained
- Remotely managed
- Remotely provisioned
- Configuration changes updated automatically
- Traffic logs recorded and reported
- Managed simply from anywhere on the Internet

Protect

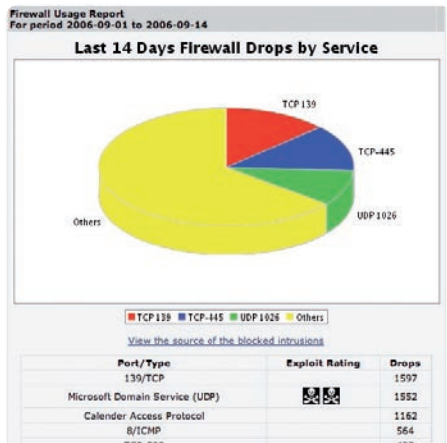

Secures your network from threats and keeps your business productive

- Enterprise level security (ICSA Labs certified)
- DPI/SPI Firewall
- Worm and intrusion detection and elimination
- Identifies and quarantines infected PC's
- Spam and Virus elimination with a Mailguard option
- High availability through automatic failover
- Encrypted VPN between sites
- Multiple concurrent tunnels
- Firewall VPNs to control access

Intrusions and their cost to business

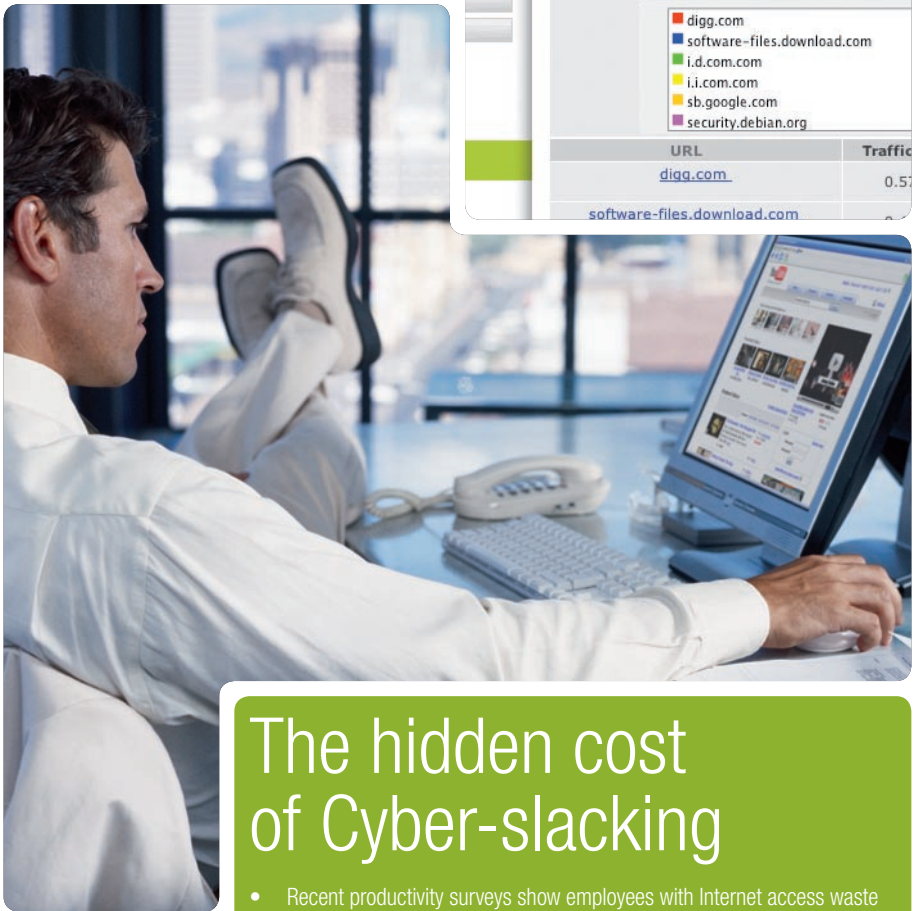

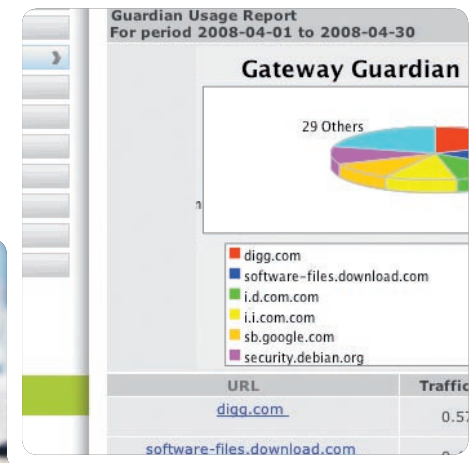

- If you hold customer or sensitive information on your network then you are at the risk of someone else wanting that information
- Trojans, Worms and Intrusion attacks can all be attempts at stealing your data to use maliciously against you, your company or your clients
- In January 2007, US based TJX Cos., the owner of T.J. Maxx and other stores had an intrusion into their computer system, compromising millions of customers' credit card numbers and other personal information.
- By August 2007 the estimated cost of the data breach had reached a staggering \$256m
- Security analysts predict that attacks of this type are growing

Control

Take back control of your Internet Connection

- Web content filtering to reduce cyber-slacking
- Block unwanted traffic types (e.g. Facebook, P2P)
- Flexible detailed usage reporting
- Remote monitoring with system alerts
- Simple web interface for system management
- Bill shock protection with a traffic threshold facility
- Ability to control the network from any Internet connected computer
- Traffic logs recorded and reported

The hidden cost of Cyber-slacking

- Recent productivity surveys show employees with Internet access waste at least two hours per week (<http://www.monash.edu.au/news/newslines/story/735>)
- At the average Australian wage rate of \$30 per hour, this equates to approx \$250 per month per employee lost due to cyber-slacking
- Therefore eliminating cyber-slacking by just one employee per site means that the system **virtually pays for itself**.

Company Overview – NetComm Limited

As an Australian owned and operated company, NetComm has been a leading provider of data communication products for over 25 years. Throughout this period NetComm has established itself as the No.1 provider of data communications solutions, alongside the explosion of broadband services worldwide.

Over the past decade, NetComm has expanded its product portfolio to encompass the areas of Networking, Routers, Wireless, VoIP and commands the way to emerging technologies such as SHDSL and 3G.

NetAssure™ is NetComm's new service entity, a centrally managed networking and security system designed to provide organisations with the protection and control needed in today's challenging business environment.

NetComm continues to provide the Australian and International market with leading data communication products, mobile broadband solutions and networking services.
